Unlike in cash games, players are not free to cash out or rebuy at any time. Sit and go entrants continue playing until they run out of chips. Prizes are awarded based on the position a player finishes the event. While the last man standing wins the entire sit and go, prizes are often awarded to players who outlast the rest of field: 1st place, 2nd place, 3rd place etc.

For a start, not all chips are equal in sit and goes. A technique known as ICM (independent chip model) needs to be employed in order to correctly assign chips a monetary value. Depending on the exact sit and go situation it may even be correct to fold pocket Aces (in Hold'em) preflop as a result of ICM considerations. See the glossary entry under ICM and Bubble for more information on this topic.

Sit and go players spend a larger amount of time playing with shallow stacks than cash game players do. Cash game players routinely rebuy to keep their stack at 100bb while sit and go players will frequently find themselves playing at stack depths of 20bb or lower. Understanding the maths behind short-stack scenarios is hence extremely important for sit and go players.
